How Sanofi is building a sustainable environment

Sanofi is working to minimize the impacts of its activities and medicines on the environment through its Planet Care environmental sustainability program, an approach that engages everyone at Sanofi.

Please reach out to planetcare@sanofi.com to get an accessible version of this information.

Carbon neutrality by 2030 and net zero emissions by 2045 Reduce Greenhouse Gas (GHG) emissions Source renewable electricity Foster an eco-fleet

Reduce GHG emissions from Sanofi activities by 55% from 2019 to 2030

100% renewable electricity across all global operations by 2030 RE 100

Foster en eco-fleet by 2030

-29% GHG emissions from Sanofi activities since 2019

62% of electricity supplied on sites worldwide is renewable

34% of our car fleet is an eco-fleet

Limit environmental footprint and adopt circular solutions

Preserve natural resources

Reduce environmental footprint

Protect and foster biodiversity on sites

Water stewardship and efficiency plans implemented on all sites by 2030

Water withdrawals reduced by

13% between 2019 and 2022

By 2025 100% of sites landfill free

>90% of waste reused. recycled or recovered

86% of waste is reused, recycled or recovered

of sites are landfill free

Monitor, manage and reduce emissions on 100%

of manufacturing sites by 2025

68%

Specific programs engaged on **72%** of manufacturing sites

and on 100% of priority sites

Improve environmental profile of products

Evaluate impacts of medicines

Eco-design products

Promote the responsible use and the proper disposal of unused medicines, medical devices and packaging

Eco-design approach

for all new products by 2025 and top selling products by 2030

7 Life Cycle Assessment **performed** on medicines and medical devices and Eco-design digital tool launched internally

impacts of top 100 selling medicines on ecosystems

Impacts on ecosystems assessed for

by 2025

66%

of top selling medicines

Develop and operate

a global program by 2030 to promote responsible use and the proper disposal of unused medicines, medical devices and packaging

Sanofi supports local, regional or national programs to collect unused medicines in many countries

Sanofi believes that working closely with its suppliers to reduce their overall environmental impact, will lead us towards a more sustainable sourcing of raw materials. In line with the Science Based Target initiative, an objective to reduce value chain GHG emissions has been set: -30% from 2019 to 2030.
