

Greenhouse Gas Verification Statement

Prepared for: MetLife

Prepared by: Quantis

June 2022

The inventory of Greenhouse Gas emissions from Scope 1, Scope 2 and Scope 3-Business travel in 2021 for MetLife has been verified by Quantis according to ISO 14064-3 to represent a total amount of:

| 2021 CO ₂ -e emissions scope | CO ₂ -e emissions in metric tons |
|---|---|
| Gross Scope 1 emissions (without carbon offset) | 12,052 |
| Gross location-based Scope 2 emissions | 51,893 |
| Gross market-based Scope 2 emissions (with RECs, I-RECs, GOs and COs) | 9,231 |
| Scope 3 emissions (Global Business Travel) | 2,151 |
| Total emissions reduction compared to 2020 | 17,975 |
| Total emissions reduction accounted from projects and non-project changes | 17,975 |

Brief description of the Verification Process

Quantis has been commissioned by MetLife for verification of their calendar year 2021 Scope 1, Scope 2, Scope 3- Business Travel Greenhouse Gas Emissions against the GHG Inventory methodology defined by MetLife. The verification was based on the verification scope, objectives and criteria as agreed between MetLife and Quantis in February 2022.

Roles and Responsibilities

The management of MetLife is responsible for supplying relevant activity data and emission factors, as well as the calculations of GHG emissions information and the reported GHG emissions.

It is Quantis' responsibility to express an independent verification opinion on the GHG emissions as provided by MetLife for the period 1st January 2021 to 31st December 2021.

Objectives and Criteria

The purposes of this verification exercise are, by review of objective evidence, to independently review:

- Whether the GHG emissions are as declared by MetLife.
- Whether the data reported are accurate, complete, consistent, transparent, relevant and free of material error or omission and compiled in accordance with the described MetLife methodology.

Level of Assurance

Quantis undertook the verification assessment with the aim to provide a limited level of assurance for Scope 1, Scope 2 and Scope 3- Business Travel emissions.

Scope

Emission sources verified were from CO₂-e arising from MetLife's Scope 1, Scope 2 and Scope 3-Business Travel emissions.

Conclusion

Based on the data and information provided to Quantis and the processes and procedures conducted by Quantis, it is concluded that there is no evidence to suggest that the reported Scope 1, Scope 2, and Scope 3- Business Travel emissions are not materially correct and are not a fair representation of GHG data and information based on the calculation methodologies utilized.
